

What is Workspace 365?

Our mission and four pillars

Our mission

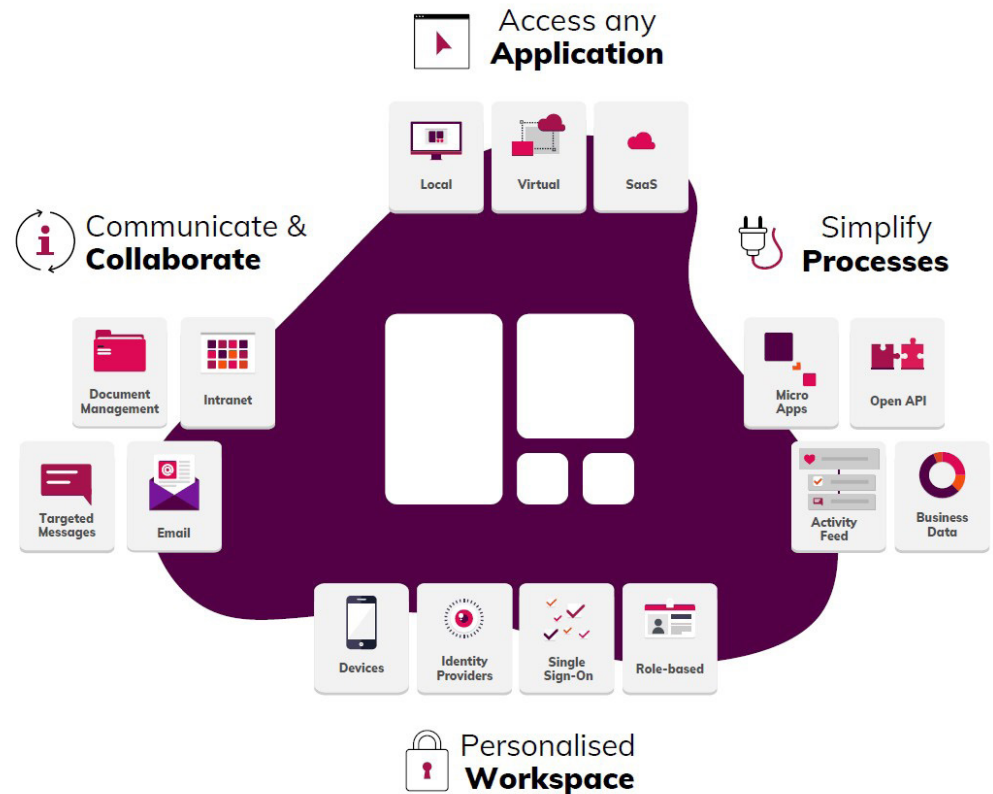

We maximize the impact of people who make the difference.

By conquering complexity to simplify work-life

Four pillars to build on

We help people to achieve more, by contributing to a happier work life. We do this with an adaptive workspace, which we continuously develop and improve to achieve our mission.

While the workspace and its features never stop evolving, there are four pillars these features and functionalities are built on. They are the fundamental elements of the adaptive workspace.

Access any Application

No matter where it's based, Workspace 365 brings all applications together in one portal and offers unified access. Offer applications in the Workspace 365 App Store, bring a new level of self-service to your workforce and integrate your application request and deployment flow.

Local

Access applications that are installed on a device through the browser-based workspace.

Virtual

Access virtual desktops and virtual applications in the browser or with a local client.

SaaS

Unite all web applications within one portal with one-click access.

Simplify Processes

Stop switching between applications by bringing tasks and business processes to the workspace.

Micro Apps

Perform tasks and find specific information from third-party applications straight from your dashboard, without having to leave the workspace.

Open API

Simply integrate (parts of) Workspace 365 into other platforms, such as your intranet or Microsoft Teams, so you can benefit from it everywhere.

Activity Feed

Unite notifications and activities from all your applications. People can perform actions instantly with the Activity Feed. The possibilities are endless.

Business Data

What data is relevant to you? Integrate your key KPIs or an entire analytical dashboard to always have instant insight into your most important data.

Communicate & Collaborate

Unite all aspects of work into one place, including the social ones.

Document Management

Unite documents from SharePoint, OneDrive and the file server in one simple Document App and easily collaborate on documents at the same time.

Intranet

Improve employee engagement. Bring your news, social feeds, contacts and other intranet elements to your workspace, or use our intranet components.

Targeted Messages

Make sure you reach the right people with the right information. With the Announcement Centre, you push information directly into the workspace.

Email

Still one of the most important means of communication. Use the Workspace 365 Email App or connect the Outlook Web App.

Personalised Workspace

Stop the information overload! Only show people what's relevant, when it's relevant to them.

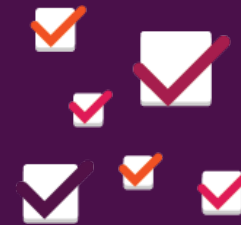

Identity Providers

Connect your Identity Provider to give access to all the right information and applications and manage the user lifecycle.

Devices

Access the workspace on any device. It will adapt to your device and only show relevant applications and information.

Single Sign-On

No more searching for or restoring passwords, no more logins. Access everything you need with one click with Single Sign-On.

Role-based

Only see the information and apps that are useful and relevant to your specific role - always with room to be personalised.

Discover how we support your digital workspace goals

Transition to the cloud

Do you struggle with your strategy for the remote desktop and file server? Is your remote desktop only used to access specific line of business applications?

Are you looking for a way to transition to a modern workspace but don't know how to cross the technology gap?

We've got good news for you.

We highlight challenges of the transition to the cloud and share how other IT leaders overcame them in this article:
